Art Unit: 1754

The following is an examiner's statement of reasons for allowance: The claims are allowable for the reasons presented by applicant in the REMARKS/COMMENTS filed on September 17, 2004. As stated in the paragraph bridging pages 13 and 14 of those arguments, it is only by the aging treatment of the invention that a composite oxide is achieved having the porosity characteristics as recited in applicant's claims 32 and 44-48. Although the claims do not require that the composite oxide powder be calcined at 600°C for 5 hours or 800°C for 8 hours, the composite oxide powder recited in these claims would be novel and unobvious over Suzuki et al (US 6,150,288) and Rajaram (US 5,993,762), since neither of these references disclose or suggest the step of aging the precipitate in an aqueous medium in the temperature range of 100 to 200°C. Accordingly there is no technical or scientific reason to conclude that the composite oxide powders disclosed by Suzuki et al '288 and Rajaram '762 would have the recited porosities when calcined at 600°C for 5 hours or at 800°C for 8 hours. .

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication should be directed to Wayne Langel at telephone number 571-272-1353.
